RE: Measurement Results of Antistatic Hand Tools

1. Background

Tested Material

I got several black polypropylene hand tools for lab characterization.

According to CENELEC/TR 50404-2003 ESD standard (Ref 4) acceptable antistatic tools would have resistivity (measured from tool handle to its end making a contact with HAZMATs) less than $1.0 \times 10^8 \Omega$, as is presented in the following table:

Sub Clause	Type of Installation	Maximum resistance to earth, ohms
10.3.4	Items fabricated from non-conductive or dissipative materials	10^6 to 10^8

2. Measurement Details

- Measurement methods are per Ref.1 and Ref. 2
- Measurement voltage: 100V
- Instrument: Resistance Meter, Prostate, Model PRS-812; Upper measurement range $10^{14} \Omega$
- Calibration due date: 28 September. 2015
- Tool electrical resistivity was measured from end to end (handle to tool's end making a contact with ESD sensitive material/component)

3. Measurement Results

All measurements were conducted at 24°C and RH 39%

K=1000; M=10⁶; G=10⁹

5. Conclusions

All tested hand tools were found to have very good static dissipative characteristics. They are good quality tools and need only GMP approval for pharmaceutical materials. For other processing industries such as food, hi-tech, chemicals, and petro-chemicals these hand tools are the best tools approved by our lab for ESD control.
