Subject: New Product Announcement – MT-200 MiniTweez® Systems, Handpiece & Accessories

PACE is pleased to announce the launch of our new MT-200 MiniTweez® Thermal Tweezer handpiece along with new systems, tips and accessories. The MT-200 is an AccuDrive® compatible (NOTE: *not* compatible with IntelliHeat or SensaTemp powered systems) heated tweezer designed to rework micro-components such as 0201s, 0402s, and 0603s, and can also easily handle larger SOTs, D-Paks, SOICs and TSOPs. It is only available with the ADS200 power supply. The handpiece incorporates major design improvements over its predecessor MT-100:

Easy, Precise Alignment of Tips: The MT-200 allows for multi-axis tip alignment and rotational (theta) alignment that provides ultimate control and targeting accuracy. Easy alignment capability is essential for reworking such small micro-chips as 0201s.

Tip-Gap Adjustment Wheel: Adjusts the gap between the tips to reduce the distance from tip-end to tip-end, reducing grip stress and lessening operator fatigue during repetitive operations.

Cool Touch™ Technology: The MT-200's aluminum Cool Touch handles dissipate excess heat and stay cool and comfortable even during extended production use.

Higher Powered Tips at a Lower Cost: Higher powered Blue-Series Tip-Heater Cartridges are made specifically for the high output ADS200 Soldering Station (see MT-200 part numbers 1130-1001-P1 through
